

BANSHI DOSHI

San Francisco, CA | 951-367-7864 | banshi.doshi@gmail.com | [linkedin.com/in/banshi-doshi/](https://www.linkedin.com/in/banshi-doshi/)

Senior Software Engineer

Senior Android Engineer advancing enterprise mobile platform modernization through scalable architecture, developer-facing API design, ML-powered feature productization, and AI-assisted engineering. Experienced in partnering with research and platform teams to deliver mobile AI innovation, converting complex business and product requirements into high-performance Android applications using Kotlin, Java, Jetpack Compose, MVVM, Coroutines, and scalable system services. Proven success in reducing technical debt, crash rates, and release cycle overhead for consumer platforms serving millions of active users. Recognized for cross-functional collaboration, engineering leadership, and building reliable mobile experiences that support sustained product growth.

CORE COMPETENCIES

Software Architecture, Project Management, Android Platform Engineering, Developer-Facing API Design, ML Feature Productization, GenAI Product Integration, System Design, Machine Learning, Mobile Development, Testing & Quality Strategy, Coaching & Mentoring, Performance Optimization, Cross-functional Collaboration

TECHNICAL SKILLS

Languages & Frameworks: Android, Kotlin, Java, Python, C, SQL, Coroutines, RxJava, React Native, Jetpack Compose, MVVM, Swift, SwiftUI, MVI

AI & Coding Agents: Claude Code, Cursor, Windsurf, Augment, Agentic AI, AI-powered Product Features, Gemini, Antigravity, Copilot, Codex, ChatGPT

MCP Integrations: GitHub, JIRA, Slack, Jenkins, Splunk, Google Drive, UserVoice, PagerDuty, Amplitude, Databricks

Tools & Practices: GraphQL, REST/JSON, CI/CD, A/B Testing, Unit Testing, Git, Internet of Things (IoT), Bluetooth/OTT, Android Studio, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Intuit | Mountain View, CA | Oct 2024 - Present

- Directed end-to-end design, development, and feature optimization of core Invoicing and Payments capabilities for the QuickBooks Android app, advancing customer workflows for millions of users.
- Architected and delivered AI-powered invoicing agent and filter list capabilities, partnering with product and engineering teams on system design decisions and production scalability.
- Championed AI-assisted development workflows using Claude Code, Cursor, Windsurf, Augment, and Firebender coding agents, accelerating feature delivery and elevating code quality across the team.
- Constructed MCP server integrations connecting GitHub, JIRA, Slack, Jenkins, Splunk, Google Drive, UserVoice, PagerDuty, Amplitude, Databricks, and internal orchestration tools, streamlining developer workflows and enabling AI-driven SDLC automation.
- Mobilized iOS and backend teams through cross-functional feature delivery, coordinating APIs and release timelines, resolving blockers, and consistently shipping on schedule.
- Engaged product, data, and design leaders in success metric definition, AI-assisted mobile workflow design, and A/B experimentation, directly influencing roadmap priorities and investment decisions.

- Instituted engineering quality standards, reaching 95% unit test coverage and leading on-call incident triage and root cause analysis, bolstering platform reliability and operational readiness.
- Spearheaded performance optimization, identifying memory leaks, reducing network calls, and optimizing app initialization, cutting crash rates 40% and improving app startup time by 30%.
- Designed and deployed an AI-powered Tracing Plugin automating trace generation, instrumentation, and documentation workflows, slashing tracing implementation time from 3.5 sprints to 30 minutes and amplifying engineering productivity over 95+%.

Lead Software Engineer | Paramount | San Francisco, CA | Apr 2022 - Oct 2024

- Oversaw a team of 6 Android engineers, driving key milestone delivery for Paramount+ and CBS applications, sustaining release momentum and broadening platform capability.
- Restructured app architecture through modern SDK adoption and multi-module design, translating requirements discovery and technical decisions into a modernized production platform foundation, raising long-term engineering scalability.
- Aligned stakeholders, directors, and product managers behind Agile and Scrum delivery cycles, unifying goals, timelines, and design decisions, deepening cross-functional execution confidence.
- Reached roughly 95% unit test coverage, advancing test automation and CI/CD practices, cultivating engineering collaboration through structured code reviews and mentorship, solidifying overall platform quality standards.
- Migrated Paramount Android application from Java to Kotlin, driving MVVM architecture adoption and Jetpack Compose UI development, cutting UI development effort by 40% and compressing feature delivery timelines for millions of active users.
- Consolidated 2 independent Paramount Android applications into a single multi-modular shared codebase, designing common modules for business logic, networking, and UI components, eliminating code duplication and maintenance overhead.

Senior Software Engineer | Paramount | San Francisco, CA | Jan 2020 - Mar 2022

- Delivered key Android features for Paramount+ spanning mobile, tablet, and TV platforms, redesigning from Java to Kotlin using DataBinding, Coroutines, Leanback, Dagger/Hilt, Paging, and Navigation libraries, elevating platform quality.
- Designed and implemented a shared Android platform framework, establishing architecture guidelines and conducting technical reviews, lowering duplicate code by 30%, improving release quality, and shortening development cycles.

Software Engineer Intern | Paramount | San Francisco, CA | Jun 2019 - Aug 2019

- Prototyped Picture-in-Picture (PiP) functionality for the CBS All Access Android app, validating technical feasibility and advancing platform capability for enhanced user viewing experiences.

Senior Software Developer | Credencys Solutions | Gujarat, IN | Jul 2013 - Aug 2018

- Engineered Android mobile applications for WeightWatchers, ABB, TVS, McDonald's, and Samsung, integrating HTTP, REST APIs, and Google Cloud Messaging, delivering real-time server communication and strengthening client platform performance.
- Facilitated Agile delivery as Scrum Master across multiple projects, driving sprint execution and expanding technical breadth through hands-on IoT, BLE, and React Native experience.
- Refactored core modules, optimizing network and database operations and implementing modern Android practices, reducing production defects, shortening release cycles, and boosting client satisfaction through scalable mobile solutions.

EDUCATION

Master of Science in Computer Science | California Baptist University

Bachelor of Science in Computer Science | Gujarat Technological University
